Model 1000A

100-Volt Variable DC Reference

7 Voltage Ranges: 1 to 100 Volt Stability: <1 ppm - 8 Hours Establish Voltage Coefficients System or Stand Alone

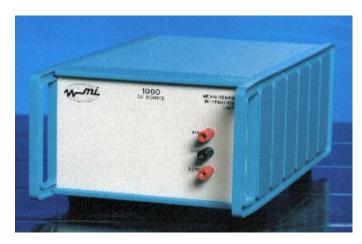

General Description:

The Model 1000A was developed as a low drift, stable, low noise 100-Volt Source for use with the Model 6000B High Resistance Bridge. However, its specifications also make it suitable for use as a stand alone, portable voltage source. It has outputs of 1, 2, 5, 10, 20, 50 and 100 volts. These voltages are switch selectable. The Model 1000A is an extension of the Model 1000 and uses the same reference for excellent short-term stability.

Model 1000

10-Volt DC Reference

1.018 and 10-Volt Outputs
Excellent Short Term Drift
Accurate to ±10 ppm
Rear and Front Panel Outputs
Battery Option

General Description:

Designed for use with the automated high resistance systems Model 6000A and the automated potentiometer (Model 8000A). The Model 1000 can be used in any application requiring a portable, stable 10-volt or 1.018-volt reference source.
